

The ideal riding jeans should be comfortable and fit great both on and off the bike. They need to look good, yet be sturdy enough to withstand whatever wear and tear you inflict on them. Above all, they need to protect you with high tear and abrasion resistance and be equipped with protection, yet remain comfortable. This is how the REV'IT! team designs all of their motorcycle jeans: highly protective yet with plenty of style.

CONSTRUCTED WITH CORDURA® DENIM

All REV'IT! Jeans are constructed from Cordura® Denim. (except for the waterproof Memphis H20) This material retains the authentic look and feel of cotton denim, but with added abrasion resistance and toughness. Jeans made from Cordura® Denim are exceptionally durable without compromising on comfort and style.

Cordura® Denim offers much better abrasion resistance to all other versions of denim on the market, including denims with aramid fibres added to the material. Only leather offers more abrasion resistance.

Cordura® Denim – A blend of fibres including 100% cotton, Aramid and Nylon strands.

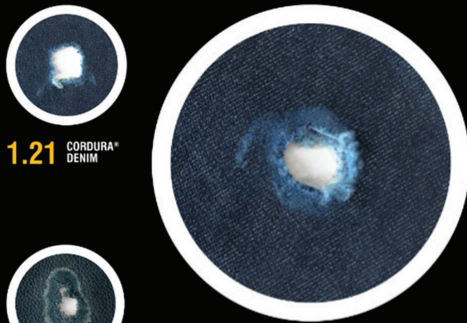

Abrasion resistance test – in seconds

FORTIFIED WITH REV'IT! PWR|SHIELD - STRONGER THAN LEATHER

By adding the PWR|Shield lining to the Cordura® Denim, REV'IT! Has created the best protecting jeans possible. PWR|Shield has been developed in-house by the REV'IT! R&D department. This revolutionary material blends various high quality fibres into a unique knitted construction, resulting in an extremely strong, exceptional cut, tear and abrasion resistant fabric.

Abrasion resistance test – in seconds

The PWR|Shield lining resides in the knee, hip and backside impact areas as described in the European CE 13595 specification. Combined with a Cordura® denim outer shell, the PWR|Shield lining meets the CE-level 1 standard for abrasion resistance. Compared to additional Kevlar panels from rival manufacturers, PWR|Shield is better ventilated and much more comfortable.

OTHER FEATURES OF REV'IT! JEANS

MOISTURE-WICKING FUNCTION BY COOLMAX® ELEMENT

REV'IT! Jeans keep you cool while riding by the addition of COOLMAX® to the Cordura® Denim. COOLMAX® is a performance technical fabric that acts as a one way barrier, allowing perspiration to move from the body through the fabric to the outer layer of the material while repelling moisture on the outer surface.

COMFORT SEAT

By relocating the crotch seams from the traditional jean pattern, REV'IT! Jeans allows for greater freedom of movement and comfort while sitting on the bike—especially for extended periods of time. This small but critical design is invisible whether on or off the bike and helps eliminate painful pressure points plus it ensures the waistband of the trousers stays in place when seated.

3M™ SCOTCHLITE™ LAMINATED REFLECTION AT TURN UP

Reflective panels strategically placed at the turn up of the trousers ensure excellent visibility while on the bike, and can be discreetly hidden when off the bike simply by rolling down the cuff.

TRIPLE STITCHING

No item of clothing is stronger than it's seams, yet too many stitches weaken material. REV'IT!'s extensive testing hit upon a technique that guarantees maximum sturdiness: triple seams with a carefully calculated number of stitches. All REV'IT! Riding denim features this triple stitching technology for extra strength and durability.

ADAPTIVE ERGONOMICS

SEESMART™ knee protector

KNEE PROTECTORS

REV'IT! Jeans come with knee protectors. There are two types and both types are removable for casual wearing off the bike. The Knox® LITE knee protectors come with the jeans in a pouch and can be installed by the customer in the height adjustable pockets inside the knees of the jeans. SEESMART™ protector's come already fitted and as they cover a larger area they don't require height adjustable pockets.

KNOX® LITE protectors are being phased out by the SEESMART™ Protectors in the newer models of REV'IT jeans.

SEESMART™ IMPACT PROTECTION TECHNOLOGY

SEESMART™ offers the highest level of flexibility while passing the EN1621-1:2012 CE-Level 1 impact tests. The flexibility of the SEESMART™ protectors allow us to produce comfortable garments that still provide serious, CE-rated motorcycle ready protection over a larger area than before. The SEESMART™ protectors are fully flexible, lightweight and highly ventilated and are larger than the actual vulnerable areas. The material used retains its CE level 1 rating even in temperatures that range from -10 to +40 degrees C.

Corona TF and upcoming models of REV'IT! Jeans like the Lombard 2 and Philly 2 will feature the SEESMART™ protectors in the knees and as an hip armour upgrade option.
